

gGastro Version 4.0.7 Release

The official release of gGastro Version 4.0.7 was in April 2009. gGastro integrates medical information, cuts costs, increases revenue, improves patient care and reduces risks for Gastroenterology practices. gGastro provides forms similar to their paper counterparts but adds easy navigation, intuitiveness and a standardized interface which allows everyone in the practice to be more efficient and ultimately provide better patient care.

In the newest release, the application is designed to match the workflow, processes and needs of a typical GI office. Office staff has the ability to organize patient appointments by provider, activity, location as well as resource. Additionally staff can organize the charts by folders including multiple chart views to easily access patient information. Directly from the note writer or from the prescription module, the physician can legibly and accurately write prescriptions and electronically send them directly to the pharmacy. Nurses and physicians can receive and manage unsolicited clinical laboratory results.

gGastro key benefits include; improve patient care, reduce costs and risks and increase revenue. With its ease of use application, gGastro is the leading EHR choice amongst Gastroenterology practices.

About gMed

gMed was founded in 1997 to create a better alternative to the paper medical chart. gMed's Digital Charting system integrates medical information, cuts costs, increases revenues, improves quality and reduces risks for selected medical specialties, including gastroenterology, cardiology and urology. gMed is a 2008 Inc. 5000 company based in Weston, Fla. More information is available at www.gmed.com.
