

gMed's New gGastro EMR an Ease-of-Use Breakthrough

Weston, Fla. (November 24, 2008) – [gMed](#), an electronic medical records (EMR) software company, unveils gGastro™, a gastroenterology-specific EMR that makes use and implementation easier, reduces staff training time and adds several critical features.

This new system, a complete overhaul of gMed's gCare, features significant enhancements that represent a breakthrough in ease of use and functionality.

"gGastro represents a major milestone in our goal to empower and streamline the GI practice," said Joe Rubinsztain, M.D., CEO of gMed. "Our clients' input has been invaluable in the development of this advanced application. We are confident that the effort put into this release will prove to be worthy by the GI community."

gGastro New Features

With client input guiding the way, [gGastro](#) incorporates GI practice-specific forms including Hepatitis C, Remicade Infusion, Dyspepsia, Esophageal Cysts and many others. Patient questionnaires feature gastro-related history, symptoms and medications, along with practice-specific physical exam and review systems. Additional gGastro highlights include:

- **E-prescribing** – Streamlines the prescription refill request and authorization process and improves patient safety and overall quality of care.
- **Patient Portal** - Empowers patients by enabling them to view their records, make requests, schedule appointments and update information via the Internet.
- **Nursing Notes** – Designed for fast and accurate pre-procedure, intra-procedure and post-procedure nursing documentation to fully eliminate paper in the ASC or hospital unit.
- **Scanning Module** – Streamlines acquisition of patient medical history and allows staff to input comprehensive patient history within 45 seconds.

With all the new benefits of gGastro, one thing that has not changed is gMed's industry-leading commitment to personalized service. gMed demands its solutions be kept simple, specialized and flexible to help drive a quick return on investment for practices.

"Physicians are in a dynamic, rapidly changing environment that demands paperless systems, but generic solutions often fall short and do not provide a solution for a more efficient practice," Rubinsztain said. "That's why we are committed to providing a safer, easier, more cost-effective way for specialty practices to work."

About gMed

gMed was founded in 1997 to create a better alternative to the paper medical chart. gMed's Digital Charting system integrates medical information, cuts costs, increases revenues, improves quality and reduces risks for selected medical specialties, including gastroenterology, cardiology and urology. gMed is a 2008 Inc. 5000 company.
